## INTRODUCTION

Data presented in this volume include water level records and unpublished seasonal precipitation information for the period summer, 1956, through summer, 1957, for the Los Angeles Region and San Luis Obispo and Santa Barbara Counties of the Central Coastal Region. Appendix A contains all unpublished seasonal precipitation, together with elevation of the gage and the agency from whom the data were collected, for stations in these areas. Depth to ground water measurements and water surface elevations, together with reference point elevation and agency from whom the data were collected, for wells located in Central Coastal Region No. 3 and Los Angeles Region No. 4, are given in Appendixes B and C, respectively.

The vast amount of precipitation and water level data found in this volume could not have been compiled within a reasonable time without the aid of high speed data handling machines. Much of the procedures for machine handling of data were developed with the assistance of the State Controller's office. However, use of these procedures required the establishment of uniform numbering systems and codes to represent information. The State Well Number was selected for the well numbering system and the latitude and longitude for designation of precipitation stations. In addition, codes were devised to represent such information as region and basin designation, and the agency from whom the basic data were obtained. The designation of numbering systems and the coding of these and other items of information used herein is presented in the following paragraphs.

## Region and Basin Designation

The region and basin numbering system used in this report generally follows that presented in Water Quality Report No. 3, entitled "Ground Water Basins in California", by the Department of Public Works, Division of Water Resources, dated November, 1952. The region areas used herein are geographic areas and are defined in Section 13040 of the Water Code. Of the nine regions defined, all of Los Angeles Region No. 4, Colorado River Basin Region No. 7, Santa Ana Region No. 8, and San Diego Region No. 9, and portions of Central Coastal Region No. 3 and Lahontan Region No. 6, are in the Southern California District Area. The areas of Regions Nos. 3 and 4 within the District are delineated on Plates B-1, C-1.

With respect to the basin numbering code, a decimal numbering system of the form X - XX.XX has been used. The number to the left of the dash refers to the geographic region described above. The digits to the left of the decimal refer to the hydrologic unit, valley, or group number, while the digits to the right of the decimal refer to the individual basin within the hydrologic unit, valley, or group. It should be noted, however, that in the tabulation of water levels presented in Appendixes B and C, the dash and decimal point have been omitted, making the number a continuous five-digit number. The locations of the various hydrologic units, valleys, or groups and the various individual basins in Regions 3 and 4 within the Southern California District area are also delineated on Plates B-1 and C-1.

## Precipitation Station Designation

The precipitation station designation used herein is based on the longitude and latitude of the station to the nearest second. This designation gives the actual location of the station to the nearest 100 feet.

## Well Numbering System

The well numbering system employed herein is that utilized by the United States Geological Survey according to township, range, and section subdivision of the Federal Land Survey. It conforms to that used in all ground water investigations made by the U. S. Geological Survey in California and has been adopted by the Department of Water Resources.

Under the system each section is divided into 40-acre plots called lots, which are lettered as follows:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Wells are numbered within each of these lots according to the sequence in which they have been assigned State Well Numbers. For example, a well having the number 10N/18E-26A1,S would be in Township 10 North, Range 18 East, Section 26, S. B. B. & M., and would be further located as the first well in lot A which has been assigned a State Well Number. In this report, well numbers are referenced either to the San Bernardino Base and Meridian (S) or the Mount Diablo Base and Meridian (M).

For some wells the letter following the Section Number is designated "X". This indicates that the well has been field located and accurately plotted with respect to its position on the map, but that the map control for the Public Land Survey is at present too poor to warrant assignment of more accurate location number.

To assist agencies using a numbering system other than the State Well Numbering System, such as the Location Number, the State Serial Number and the Ventura Number, cross indexes have been prepared and are presented in Volume IV.

#### Flowing or Dry Well

In the tabulation of ground water levels at wells, the code "FL.0" and "DR.0" are used for flowing and dry measurements, respectively. These codings are found in the column presenting information on distance from reference point to water surface.

#### Questionable Measurements

Certain of the measurements in Appendixes B and C in the column "Dist. R. P. to Water Surface" may be followed with an asterisk superscript to indicate a questionable measurement. Depth to ground water measurements may be questionable for such reasons as (a) well being pumped, (b) nearby pump operating, (c) casing leaking or wet, (d) well pumped recently, (e) air gage measurement, and (f) measurement determined to be questionable by the computer. Items "a" through "e" are reasons noted by the fieldmen and were

obtained at the time of transcription of the record from the various agencies from whom the data were collected. With respect to item "f" the computer was programmed to "flag" all measurements for which the change in elevation is greater than five feet per month when compared to the next prior measurement for the same well. This "reasonableness check" was installed primarily to find errors in transcription and to point out possible pumping measurements. Measurements indicated to be unreasonable have been reviewed and where possible to so determine, errors resulting from incorrect transcription have been removed. The specific reason for a questionable asterisk on any given measurement may be obtained through the Southern California District Office of the Department of Water Resources.

#### Agency Code

Presented in the following list are the code numbers for the agencies from whom data on precipitation and water level were obtained. The agency code consists of a five-digit number, the first of which is a region number. Thus, 41101 refers to agency 1101 in Region 4. Because of limitations of punch card space, the agency code has been shown as a four-digit number without the region number. Therefore, the four-digit agency code should always be referred to the region in which the station or well is located.

Agency Code for Central Coastal Region No. 3

Agency Code

Agency Name

4002	U. S. Army Corps of Engineers at Los Angeles
4111	San Luis Obispo County Farm Agent
5000	U. S. Geological Survey at Santa Barbara
5050	Department of Water Resources

Agency Code for Los Angeles Region No. 4

Agency Code

Agency Name

1050	Department of Water Resources
